

Patent Application

of

W. Steve G. Mann

for

**MEANS, APPARATUS, AND METHOD OF SECURITY AND
CONVENIENCE THROUGH VOLUNTARY DISCLOSURE**

of which the following is a specification:

ABSTRACT

Persons such as travellers in an airport are given an opportunity to remove themselves from being under suspicion of terrorism or the like. Persons are provided with one or more opportunities to reveal information about themselves by way of a personal disclosure that would normally be unacceptably invasive if such disclosure were mandatory. The nature of the personal disclosure is such that almost all persons frequently choose to make such a disclosure in their ordinary day-to-day lives, but would be offended if required to make the same disclosure. In one embodiment, persons are given an opportunity to use an airport lounge spa facility with separate showers, saunas, steam rooms, and whirlpool baths, for men and women. Clothing is safely held (and possibly inspected) by locker room attendants while patrons are using the spa. A method of cost management is provided, whereby the reduction in suspicion (by way of the personal disclosure) of the large numbers of people using the spa is translated into a cost savings in terms of underwriting insurance, or the like, whereby this cost savings funds the construction of the voluntary personal disclosure facility. In another embodiment patrons are offered a free medical exam or health diagnostic that includes a personal disclosure, such as undressing, being scanned, or the like. Other embodiments include an opportunity to play a free Virtual Reality (VR) game using VR goggles having a retinal scanner, or an opportunity to play a free video game by pressing a fingerprint scanner to generate a virtual world from a magnified video image of the participant's thumb.
